

Programming Assignment 4 Report

To compile all programs run this command:

- `javac *.java` // compiles all .java files
- `python ClientUDP.py`

Steps to run calculating server:

Step 1: Log onto 2 separate tux machines (i.e. tux060 & tux061)

Step 2: Compile all files on either tux machine

Step 3: On tux060 run: `python ClientUDP.py tux061 10010`

Step 4: On tux061 run: `java ServerUDP 10010`

Step 5: Follow the prompts given by ClientUDP

Step 6: See how the client and server interact in the separate terminal windows

Step 7: Quit program

Group ID is added to the port programmatically: 10010 → 10017

Our program runs sufficiently.
